ABSTRACT OF THE DISCLOSURE

Lead frame connectors for connecting optical sub-assemblies to printed circuit boards

in optical transceiver modules. The lead frame connectors include a stamped and bent

conductive lead structure that is encased in an insert injection molded plastic casing. The

plastic casing provides electrical insulation for the conductors in the lead frame as well as

mechanical support for the finished component. The lead frame connectors connect to the

leads associated with the optical sub-assemblies and are surface mounted onto the printed

circuit board to establish connectivity between the optical sub-assembly and the printed

circuit board. The lead frame assemblies are generally more reliable and less expensive than

using flexible printed circuit board structures to establish electrical connectivity between

optical sub-assemblies and transceiver printed circuit boards.
